

Lab 1

Name:Sai Manogna BV

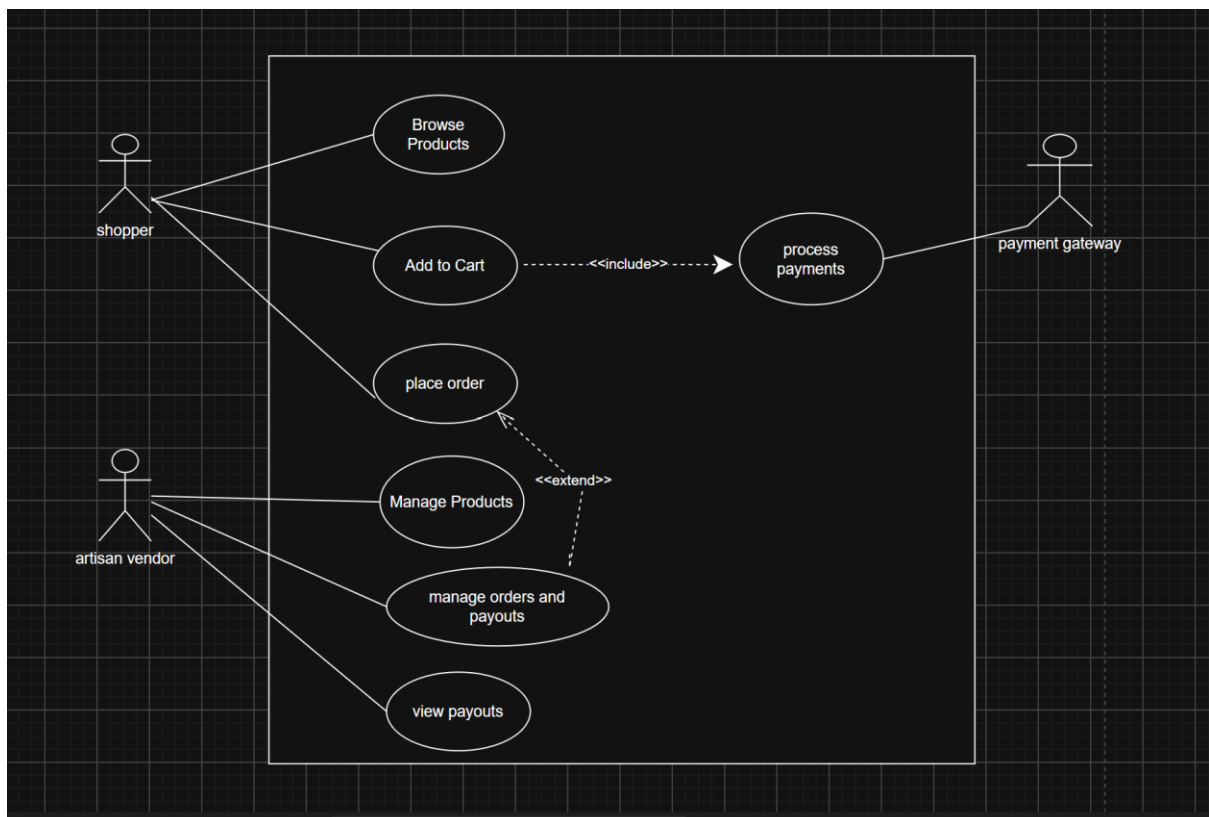

SRN:PES1UG24CS399

Deliverable 1:

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall split customer payments among multiple vendors after deducting a 5% platform fee .	High	Pass: Vendor payouts + 5% fee = total cart value. Fail: Any mismatch occurs.	Ensures correct payment distribution and platform commission.
FR-002	Functional	The system shall allow vendors to create and manage their storefront .	High	Pass: Vendor can create and update storefront details successfully. Fail: Changes are not saved.	Helps artisans establish and manage their online stores.
FR-003	Functional	The system shall allow vendors to add, update, and remove products from their catalogue.	High	Pass: Product changes are reflected in the catalogue. Fail: Any change is not reflected.	Keeps vendor product information accurate and updated.
FR-004	Functional	The system shall allow shoppers to browse products, add them to cart, and place orders .	High	Pass: Shopper can add products from multiple vendors and place an order. Fail: Order cannot be placed.	Provides the core shopping functionality of the marketplace.
FR-005	Functional	The system shall allow vendors to view orders and their corresponding payouts .	Medium	Pass: Vendor can view order and payout details. Fail: Details are missing or incorrect.	Helps vendors track their sales and earnings.
NFR-001	Nonfunctional	The system shall render high-resolution product images with catalogue load times below 500 ms .	High	Pass: Load time is < 500 ms. Fail: Load time is ≥ 500 ms.	Provides a fast and responsive shopping experience.

NFR-002	Nonfunctional	The system shall secure payment and payout data during all payment transactions.	High	Pass: Payment data is transmitted securely using HTTPS/TLS. Fail: Data is transmitted without encryption.	Protects sensitive financial information.

Deliverable 2:

Deliverable 3:

Use Case: Place Order

Use Case ID: UC-03

Primary Actor: Shopper

Preconditions

1. Shopper is logged in.
2. Shopper has at least one product in the cart.

Main Success Scenario

1. Shopper reviews the cart.
2. System displays the selected products and total amount.
3. Shopper proceeds to checkout.
4. Shopper selects a payment method.
5. System processes the payment.
6. Payment is successfully approved.
7. System creates the order.
8. System calculates the 5% platform fee and vendor payouts.
9. System displays order confirmation.

Postconditions

1. Order is successfully created.
2. Payment is recorded.
3. Vendor payouts are calculated.
4. Shopper receives confirmation.

Alternate Flow — Payment Declined

1. Payment gateway declines the payment.
2. System displays a payment failure message.
3. Shopper selects another payment method.
4. System retries the payment.
5. If payment succeeds, the main flow continues.
6. If payment fails again, the order is cancelled.
